CENTRAL LABORATORY GREENING CONTINUES

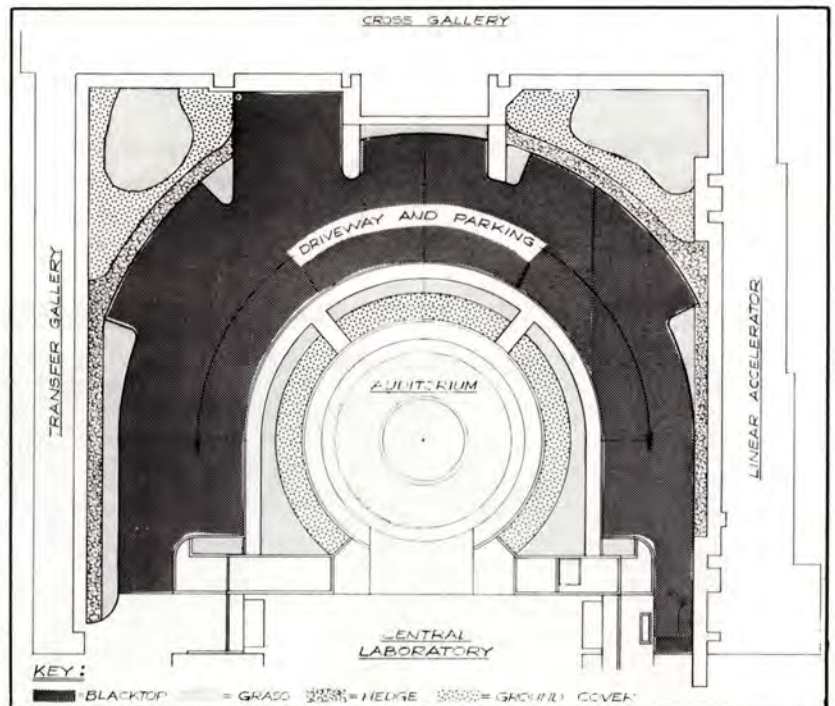

Conversion of the Central Laboratory parking areas continues this fall as Site Services proceeds with a planting and improvement program. The dust and gravel will disappear, replaced by a paved roadway and pleasant outdoor lounge facilities.

On the west side of the Central Laboratory landscaping of an irregular-shaped island in the center of the largest parking area will relieve the asphalt expanse. Among the large trees to be planted there will be sugar maple, red maple, redbud crab, and Austrian pine. Some tall hedge buckthorn will also appear. Shrubs to be planted will include golden drop cinquefoil, bottle brush buckeye, and dwarf-winged euonymus. Another new addition in this area will be several hundred spring bulbs.

The substantial grading and soil preparation now going on in the courtyard between the Central Laboratory and the Cross Gallery will result in a major facelift for this vital area. (See drawing above.) Parking will return here, surrounded by a landscaped courtyard.

The ground immediately around the Auditorium Building will be landscaped in a more formal manner with year-around-coloring plants. The Transfer Hall, Control Room, and Linac Galleries will be bordered by hedgerows and grassed areas. The new resulting shaded areas will contain benches in the corners for employee and visitor enjoyment.

In the front of the Central Laboratory the recent planting of low shrubs in the shape of the Fermilab logo is clearly visible from the observation area of the 15th floor.

LAST CHANCE...

Final entries will be accepted until Wednesday, September 17, for the second Accelerator Canoe Race. The race is open to Fermilab employees, visiting experimenters, contractor employees, and, for the first time, to members of their families over 14 years of age.

The race will be held in the cooling ponds of the main accelerator. The course begins downstream of the dam at the F-4 sector and runs clockwise, ending upstream of the same dam. There are 15 dams and 15 portages.

Several of last year's entries will be back for more of the challenging race.

Arrangements will be made to permit spectators to watch the race. They may enter the viewing area between F-3 and A-1 by crossing the berm at the Transfer Hall stile or through the road next to the Booster East Gallery. Guards will be there to assist visitors.

VOLUNTEERS ARE NEEDED to supervise portages. Call Larry Allen, Ext. 3721 or Jane Theis, Ext. 3560. They also know where canoes can be rented. The Amateur Radio Club will provide communications.

FALL AUCTION AT FERMILAB

Site Services has completed preparations for Fermilab's 1975 livestock auction. At 10 a.m. on Tuesday, September 23, 13 buffalo and eight Scottish Highland cattle will be offered for sale under the direction of auctioneer Art Feller.

The sale is part of the Laboratory's land management program intended primarily to reduce the size of the buffalo herd to match the size of the pasture that is available at Fermilab. It will also correct the male-female ratio in the herd. One buffalo cow with a crooked horn that has caused injuries to other animals, will also be sold.

From the buffalo herd, a total of 12 bulls and one cow will be sold. Two breeding age bulls and 12 cows will remain as the Fermilab herd.

The sale of the Scottish Highland cattle will enable Fermilab to continue to maintain the herd as registered stock with more controlled breeding records. Ten cattle will remain in the Fermilab herd.

The Scottish Highland cattle were donated to Universities Research Association in 1973 by Mr. and Mrs. James Bannister of St. Charles with the understanding that the Laboratory would maintain the herd as a registered herd and keep them available for public viewing.

The cattle and the buffalo have become popular public attractions at Fermilab. The Fermilab auction sale is being advertised in the surrounding farm area.

The Fermilab Public Information office now has available for distribution copies of a pamphlet entitled, "The American Buffalo," published by the National Buffalo Association, Pierre, South Dakota, which gives the history of the buffalo's existence in America. The publication notes that the buffalo is no longer in danger of extinction; 60,000 head are now found in the U.S. and Canada.

CHICAGO FILM FESTIVAL ON WINTER PROGRAM HERE

Fermilab's International Film Society will open its winter schedule of selected films on Friday, September 12 with The World of Apu. This is an Indian film directed by Satyajit, with music by Ravi Shankar.

This is the story of Apu, a would-be writer, who attends a wedding as a guest but due to unusual circumstances becomes the bridegroom.

Copies of the film society's complete winter schedule are being distributed with this issue of The Village Crier.

The International Film Society has completed arrangements with the Chicago International Film Festival in which Fermilab will play an important role in this year's Festival, from November 13-16. A jury of Fermilab people will select the winners of the Chicago Festival's science film categories. The winners, and all of the films in this category, will then be shown at no charge, in the Fermilab Auditorium.

Other selected films from the Chicago Festival will be included in the Mini-Festival at Fermilab. These include entertaining short films, feature films, and films for children. Further details will be announced in early November.

The International Film Society's regular monthly film selections continue on the second Friday of each month. The charge is usually \$1.00 for adults; 50¢ for children.

+
+ ABOUT YOUR BENEFITS... +
+
+ Any person employed by Universities Research Association (including Fermilab) +
+ is covered by the Group Life Policy starting with their first day of employment. +
+ The basic coverage of the Group Life Insurance program is provided at no cost to +
+ the employee. The amount of this coverage is based on salary. Two supplemental +
+ coverages may be added; employees pay premiums for these plans, bringing total +
+ possible coverage equal to three times base salary. +
+
+ For more information see your Employees Benefit Handbook, page 35, or call +
+ Ralph Wagner, Ext. 3395. +

YOU MAY WANT TO READ...

..."The Quandry Over Quarks," by Robert March, recently awarded the American Institute of Physics-U.S. Steel Foundation 1975 Science-Writing Award. "The Quandry..." appeared in the 1974 edition of World Book's Science Year, available in the Fermilab Library. Dr. March, a professor of physics at the University of Wisconsin, is a Fermilab experimenter and a frequent visitor to Fermilab. He was the recipient of the same award in 1971 for his book, "Physics for Poets," a textbook for non-science students at Wisconsin.

...The current issue of Argonne Credit Union's News and Views, describing a new class of shares that will earn 7% dividends if left on deposit for a minimum of one year. The newsletter also reports that a 6½% dividend was paid on all common shares on August 31, the highest ever. Share accounts at the Argonne Credit Union have grown by \$1.3 million since January 1, 1975, the article reports. Further details from June Olsen, C1-1W.
